

# Premium POS Industry

People are always going to go shopping.  
A lot of our effort is just 'how do we make the  
retail experience a great one!

# Height adaptable frame

RGB Illuminated frame that can be easily replaced for maintenance. It only takes three screws and less than **a few** minutes to complete remove and instal a new frame.

**Basic skills required and can be performed in shops.**

**Not to mention the 80% reduction in weight compared to previous prototypes.**

# Nonilluminated graphics stripe

Interchangeable branded visuals that highlight the brand without covering products or health warnings

# Metal as Primary Material

At only 0.8 mm thick metal is the only material that can provide required durability for required minimum of 5+ years.

Metal is also very resistant to any potential heat emitted from LED lights and does not change structurally in any way- unlike plastics or similar materials.

Adaptability – higher range of tolerance in height unlike plastic or solid surface.

Multiple options when it comes to colours.

And most importantly best option from sustainability point of view.

# Versatile and Modular

Upper smaller size or bottom big doors with clever gravity self-closing system. These flaps are back illuminate with printed and easily replicable visuals that stand out.

Both flaps are attached by strong magnets that allow you to transform the display and simply insert more pushers or perform maintenance in seconds.

# Illuminated packs

More LEDs densely arranged makes for a better product lighting, **without the need for both top and bottom LED stripes.**

# Thank You.
